

Exactly What Can Medical Murray Do For You?

Any or all of the following medical device development services:

Review current state of the art

Patent search

Design

Modeling

Build prototypes

Test prototypes

 Functional

 Biomechanical

 Performance in animal components or simulated biomechanical model

Refine design for mass production

Assist with proper classification of device

Originate and file (on customer behalf) proper FDA documentation for approval

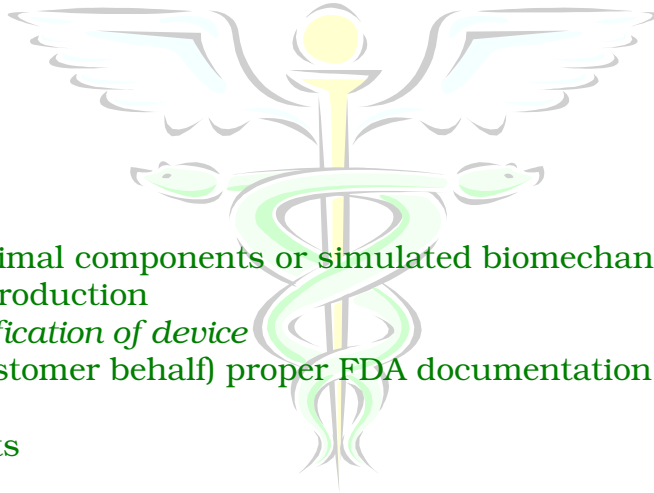

Biocompatibility studies

Sterilization requirements

Packaging design

Produce early stage production needs

Produce final product, or transfer to manufacturer of your choice

What Do Our Customers Consider Our Strengths To Be?

Innovative mechanical design

Expertise with all medical materials: applications, fabrication, processing;

Advanced ability to convert desired performance specs into the correct material blends

Miniaturization techniques – significant magnification required on many devices

Nanomolding experience – sub-micro injection molding processes

Low volume production – early stage production to get you to the “big time”

FDA submissions – will file for FDA approval and create all supporting documentation

Why Do Our Customers Keep Coming Back?

Capability to begin your project immediately

Single source for all development services from concept to production

Ability to guide your device through all the development steps

Willingness and ability to change design directions immediately as required

Ability to manage multiple vendors to achieve your desired results

Willingness and ability to tackle and solve the unknown, & move the technological frontier

No company is more efficient at converting your development \$'s into the desired results!
